Here are some tips to help you prepare for the long ride:

- 1) Aim to ride 3 times per week, no less than twice, with one longer ride starting around 60 min or 30km and progressing to 100km in week 11. Increase the distance of your long outdoor ride by 5-10km every 1-2 weeks. Aim to include hill training on one of the short rides and in some long rides.
- 2) Target to complete at least 3-4 x 100+km rides and one 160km ride by Week 15 (Friday June 12th) .
- 3) Include strength movements on non-ride days and after shorter rides (lunge, squat, split-squat, tricep pushups, planks, standing deadlift). Stretch (hip flexors & quads) and move after long rides.
- 4) Practice consuming sufficient and appropriate nutrition & hydration during long rides to improve recovery and prevent cramping.
